Solution: For this question, we can solve it by finding all solutions and proving there are no others. 3.  $\frac{m}{n} = 1(4.1)$  (a) First, we observe that  $m$  and  $n$  are positive integers, since  $0 < \frac{m}{n} < 3$ . So,  $m > 0$ . So  $m$  is a positive integer,  $3m = 2n + 1$ . So  $2n = 3m - 1$ . is an integer, then  $n$  has to be a nonnegative integer.

### **Practice problems for the Math Olympiad**

Problem 1.2.1. A small country has a very simple language. People there have only two letters and all their words have exactly seven letters. Calculate the maximum number of words people can use in that country. Solution. There are two possibilities for each letter. So 27 possibilities for the 7 letters. So they can use at most 27 words. Problem 1.2.2.
