Procedural programming is a programming paradigm, derived from structured programming [citation needed], based upon the concept of the procedure call. Procedures, also known as routines, subroutines, or functions, simply contain a series of computational steps to be carried out. Any given procedure might be called at any point during a program's execution, including by other procedures or itself.

In computer programming, data-driven programming is a programming paradigm in which the program statements describe the data to be matched and the processing required rather than defining a sequence of steps to be taken. Standard examples of data-driven languages are the text-processing languages sed and AWK, where the data is a sequence of lines in an input stream – these are thus also ...

Engineering Essentials: What Is a Programmable Logic

- Hi. I'm Simon Allardice, and welcome to Foundations of Programming: Object-Oriented Design. This course exists because everyone who learns to program hits the same wall. First, you get the through the fundamentals, the basic syntax of a programming language. You learn how to write some code. But soon you realize there's a huge difference between being able to write a few lines of code, and ...
