In differential geometry, a geodesic (/ ěœ dě' iě• ě™ ě^ d ě s ě^a k, ěœ dě' iě• oěš-, -ě^ d iě•-, -z ě^a k /) is a generalization of the notion of a "straight line" to "curved spaces". The term "geodesic" comes from geodesy, the science of measuring the size and shape of Earth; in the original sense, a geodesic was the shortest route between two points on the Earth's surface, namely, a segment ...

In mathematics, the Gaussian or ordinary hypergeometric function ${}_2F_1(a,b;c;z)$ is a special function represented by the hypergeometric series, that includes many other special functions as specific or limiting cases. It is a solution of a second-order linear ordinary differential equation (ODE). Every second-order linear ODE with three regular singular points can be transformed into this ...

Â§4. The PâˆGâˆD family of associate. minimal surfaces. Schwarz's P and D surfaces and their associate surface G (the gyroid) are the topologically simplest examples of embedded TPMS that have cubic lattice symmetry. They are related by the continuous bending transformation described in 1853 by Ossian Bonnet. The mean curvature (which is zero at every point), the Gaussian curvature, and the ...
