

seeds seeds seeds pdf

Flowering plants grow from seeds. A sprouting seed must absorb water before it will start to grow. It must also have soil firmly packed around it and have warmth from the sun. Inside the seed is a tiny embryo, surrounded by stored food. When the embryo starts growing, roots grow downward and a stem grows upward.

adequately on the plant also leads to nonviable seed. Common, self-pollinated, annual plants from which seed may be saved include lettuce, beans, peas, herbs, and tomatoes. Beans and peas: Allow seed pods to turn brown on the plant. Harvest pods, dry for one to two weeks, shell, then store in a cool (below 50° F), dry environment in a paper bag.
