

semiconductor lasers fundamentals and pdf

Effective and economical burn-in screening is important for technology development and manufacture of semiconductor lasers. We study the burn-in degradation behavior of wavelength-division multiplexing semiconductor lasers to determine the feasibility of short burn-in. The burn-in is characterized by the sublinear model and correlated with long-term reliability.

Advances in OptoElectronics - Hindawi Publishing Corporation

Lasers are distinguished from other light sources by their coherence. Spatial coherence is typically expressed through the output being a narrow beam, which is diffraction-limited. Laser beams can be focused to very tiny spots, achieving a very high irradiance, or they can have very low divergence in order to concentrate their power at a great distance.

Laser - Wikipedia

A dye laser is a laser which uses an organic dye as the lasing medium, usually as a liquid solution. Compared to gases and most solid state lasing media, a dye can usually be used for a much wider range of wavelengths, often spanning 50 to 100 nanometers or more. The wide bandwidth makes them particularly suitable for tunable lasers and pulsed lasers. The dye rhodamine 6G, for example, can be ...

Two organolead halide perovskite nanocrystals, $\text{CH}_3\text{NH}_3\text{PbBr}_3$ and $\text{CH}_3\text{NH}_3\text{PbI}_3$, were found to efficiently sensitize TiO_2 for visible-light conversion in photoelectrochemical cells. When self-assembled on mesoporous TiO_2 films, the nanocrystalline perovskites exhibit strong band-gap absorptions as semiconductors. The $\text{CH}_3\text{NH}_3\text{PbI}_3$ -based photocell with spectral sensitivity of up to 800 nm yielded a ...
