BAKELITE, The First Synthetic Polymer Bakelite, a phenol-formaldehyde polymer, was the first completely synthetic plastic, first made by Leo Baekeland in

### **POLYMERS - chymist.com**

Polymers are of two types: naturally occurring and synthetic or man made.. Natural polymeric materials such as hemp, shellac, amber, wool, silk and natural rubber have been used for centuries. A variety of other natural polymers exist, such as cellulose, which is the main constituent of wood and paper.. The list of synthetic polymers, roughly in order of worldwide demand, includes polyethylene ...

### **Polymer - Wikipedia**

Silk is a natural protein fiber, some forms of which can be woven into textiles.The protein fiber of silk is composed mainly of fibroin and is produced by certain insect larvae to form cocoons. The best-known silk is obtained from the cocoons of the larvae of the mulberry silkworm *Bombyx mori* reared in captivity (sericulture).The shimmering appearance of silk is due to the triangular prism ...

The Basics of Plastic Manufacturing. The term "plastics" includes materials composed of various elements such as carbon, hydrogen, oxygen, nitrogen, chlorine, and sulfur.

### **How Plastics Are Made**

Biodegradable materials are used in packaging, agriculture, medicine and other areas. In recent years there has been an increase in interest in biodegradable polymers. Two classes of biodegradable polymers can be distinguished: synthetic or natural polymers. There are polymers produced from ...

### **Materials | Free Full-Text | Biodegradable Polymers**

Multiple biological, synthetic and hybrid polymers are used for multiple medical applications. A wide range of different polymers is available, and they have further the advantage to be tunable in physical, chemical and biological properties in a wide range to match the requirements of specific applications.

### **Applications of synthetic polymers in clinical medicine**

1. Introduction. During the wound healing process, dressings are used for the regeneration and repairing of dermal and epidermal tissues. Wound dressing materials, as physical barriers permeable for moisture and oxygen, protect the wound mainly against microorganisms (Adamian et al., 2004).For the stimulation of wound healing, a passive dressing is essential for maintaining an optimally moisture.
