For any such process $\{X_t = \{X_t(t)\}$ with transition kernel P on a general state space X , and the following are
obtained. Spectral Theory: For a large class of (possibly unbounded) functionals $F: X \rightarrow \mathbb{C}$, the kernel
 $P_b(x, dy) = e^{F(x)} P(x, dy)$ has a discrete spectrum in an appropriately defined Banach space.

Spectral Theory and Geometry Bruno Colbois Preamble : These are informal notes of a series of 4 talks I
gave in Teheran, in the CIMPA-UNESCO-IRAN School "Recent Topics in Geometric Analysis", May 21-June
2, 2006. The goal was to give an introduction to the geometric spectral theory of the Laplacian acting on p-di
fferential forms.

(PDF) Spectral theory of Fourier--Stieltjes algebras

spectral theory is comparatively easy for Hermitian operators, it is comparatively hard for normal operators.
The nature of the difficulties varies with the approach. For instance, in the approach via Banach algebras, the
ultimate weapon is the Gelfand-Naimark representation theorem for commutative C^* -algebras, a definitely
advanced technique [9].

Spectral methods permeate the theory of partial differential equations. One solves linear PDEs by separation of variables, getting eigenvalues when the spectrum is discrete and continuous spectrum when it is not.
