Speech perception is the process by which the sounds of language are heard, interpreted and understood. The study of speech perception is closely linked to the fields of phonology and phonetics in linguistics and cognitive psychology and perception in psychology. Research in speech perception seeks to understand how human listeners recognize speech sounds and use this information to understand ...

Neural networks emerged as an attractive acoustic modeling approach in ASR in the late 1980s. Since then, neural networks have been used in many aspects of speech recognition such as phoneme classification, isolated word recognition, audiovisual speech recognition, audiovisual speaker recognition and speaker adaptation. In contrast to HMMs, neural networks make no assumptions about feature ...

What are assistive devices? The terms assistive device or assistive technology can refer to any device that helps a person with hearing loss or a voice, speech, or language disorder to communicate. These terms often refer to devices that help a person to hear and understand what is being said more clearly or to express thoughts more easily.

NEURAL CONTROL OF SWALLOWING The brain communicates with muscles via upper motor neurons and lower motor neurons. The upper motor neurons (UMN) communicates signals from the brain to the lower motor neurons (LMN) which are the final neurons connecting to muscle fibers. Cranial nerves, whose axons leave from the brainstem, are the lower motor neurons for the vast majority of muscles involved in ...
