In a nutshell, functional analysis is the study of normed vector spaces and bounded linear operators. Thus it merges the subjects of linear algebra (vector spaces and linear maps) with that of point set topology (topological spaces and continuous maps).

A primary functional analysis technique is the Functional Flow Block Diagram (FFBD). Purpose: to show the sequential relationship of all functions that must be accomplished by a system. Each function (represented by a block) is identified and described in terms of. inputs, outputs, and interfaces.

This it is, but it is more. This theorem really tells us about the functional calculus for a normal operator and, hence, about the weakly closed C^* -algebra generated by the normal operator. In Section IX.8 this approach culminates in the complete description of the functional calculus for a normal operator.

He is one of the best educators of advanced mathematics you can come across. In life we come across many teachers, few great teachers and fewer teachers like Professor Rao.

How to self-study functional analysis - Quora

Functional analysis is an abstract branch of mathematics that originated from classical analysis. The impetus came from applications: problems related to ordinary and partial differential equations, numerical analysis, calculus of variations, approximation theory, integral equations, and so on.

INTRODUCTION TO FUNCTIONAL ANALYSIS 5 1.1.1. 2π -periodic functions. In this part of the course we deal with functions (as above) that are periodic. We say a function $f: \mathbb{R} \rightarrow \mathbb{C}$ is periodic with period $T > 0$ if $f(x + T) = f(x)$ for all $x \in \mathbb{R}$. For example, $\sin x$, $\cos x$, $e^{ix} (= \cos x + i \sin x)$ are periodic with period 2π .

Functional analysis. In its most general form such a study falls into three parts: 1) the introduction and study of infinite-dimensional spaces as such; 2) the study of the simplest functions, namely, when takes values in an infinite-dimensional space and in a one-dimensional space (these are called functionals (cf.

Functional analysis (FA) methodology is a well-established standard for assessment in applied behavior analysis research. Although used less commonly in clinical (nonresearch) application, the basic components of an FA can be adapted easily in many situations to facilitate the treatment of problem behavior.
