Keresley Sustainable Urban Extension

Smart growth is an urban planning and transportation theory that concentrates growth in compact walkable urban centers to avoid sprawl. It also advocates compact, transit-oriented, walkable, bicycle-friendly land use, including neighborhood schools, complete streets, and mixed-use development with a range of housing choices. The term "smart growth" is particularly used in North America.

2.1. Economic costs. Pre-construction costs can be considerable and include ground investigations and survey work required before the physical construction of the utility takes place. As an integral part of this stage, asset location can attract large costs due to limitations associated with soil type, utility type and depth (Sterling, 2000, Thomas et al., 2008).
