

transport processes in chemically pdf

An electron transport chain (ETC) is a series of complexes that transfer electrons from electron donors to electron acceptors via redox (both reduction and oxidation occurring simultaneously) reactions, and couples this electron transfer with the transfer of protons (H⁺ ions) across a membrane. This creates an electrochemical proton gradient that drives the synthesis of adenosine triphosphate ...

Electron transport chain - Wikipedia

Physical weathering. Physical weathering, also called mechanical weathering or disaggregation, is the class of processes that causes the disintegration of rocks without chemical change. The primary process in physical weathering is abrasion (the process by which clasts and other particles are reduced in size). However, chemical and physical weathering often go hand in hand.

Three basic methods to separate gases - CO2 Capture Project

The study of self-propelled nanoparticles, although in its infancy, is important for nanoscale transport. Synthesis of catalytic metallic nanomotors using wet-chemical methods provides an alternative to top-down lithographic methods.

Microtubules, the intra-cellular transport system, health and longevity. By Vince Giuliano. Image source. Microtubules play important and ever-changing structural roles in cells, play key roles in embryo development and cell division, are the basis for the intra-cellular molecular transport system, and most likely play important roles in gene activation and epigenetic processes.
