Validation is an essential component of verification and requires substantiation that the HACCP plan, if implemented effectively, is sufficient to control the food-safety hazards that are likely to occur.

#### **Chapter 10: Principle 6: Verification Procedures**

Verification and validation are independent procedures that are used together for checking that a product, service, or system meets requirements and specifications and that it fulfills its intended purpose. These are critical components of a quality management system such as ISO 9000. The words "verification" and "validation" are sometimes preceded with "independent", indicating that the verification and validation is to be performed by a disinterested third party.
